

SCTA Internship Of Taylor Lemmon

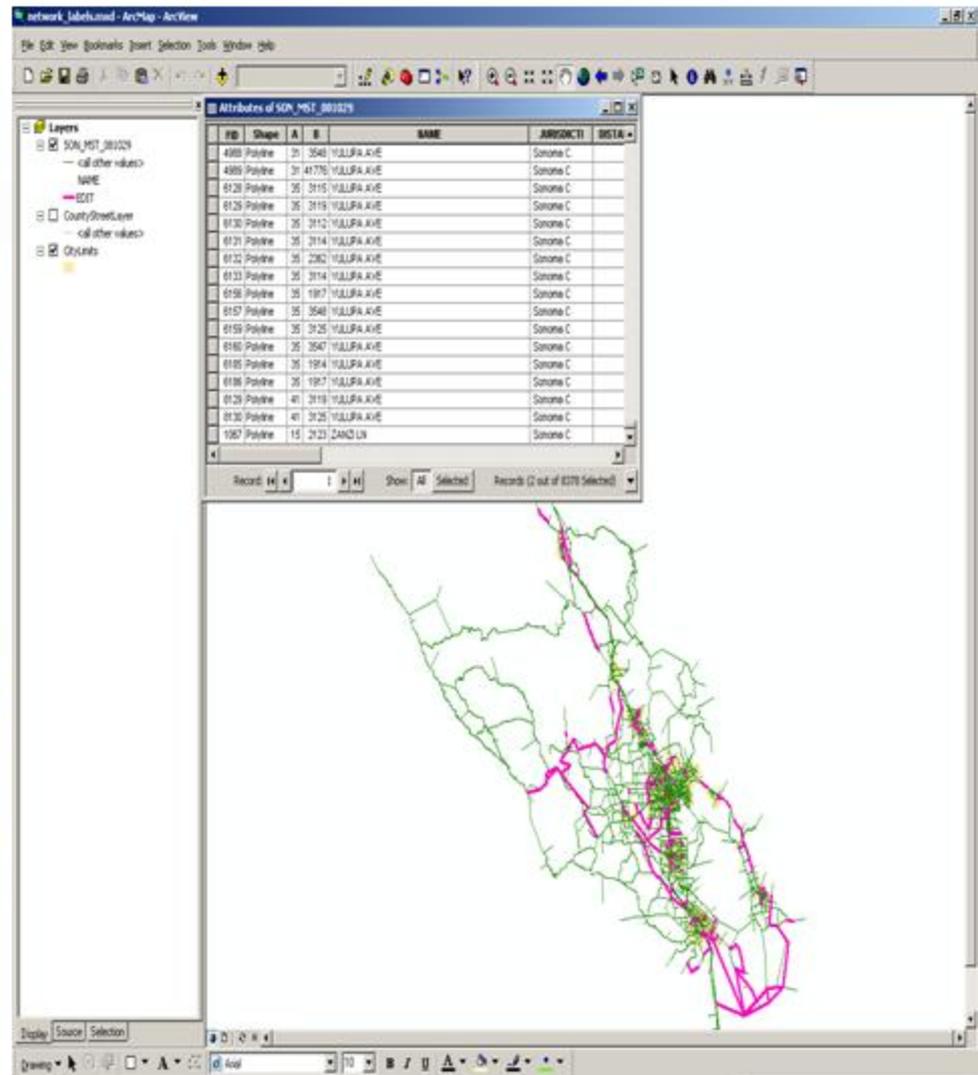

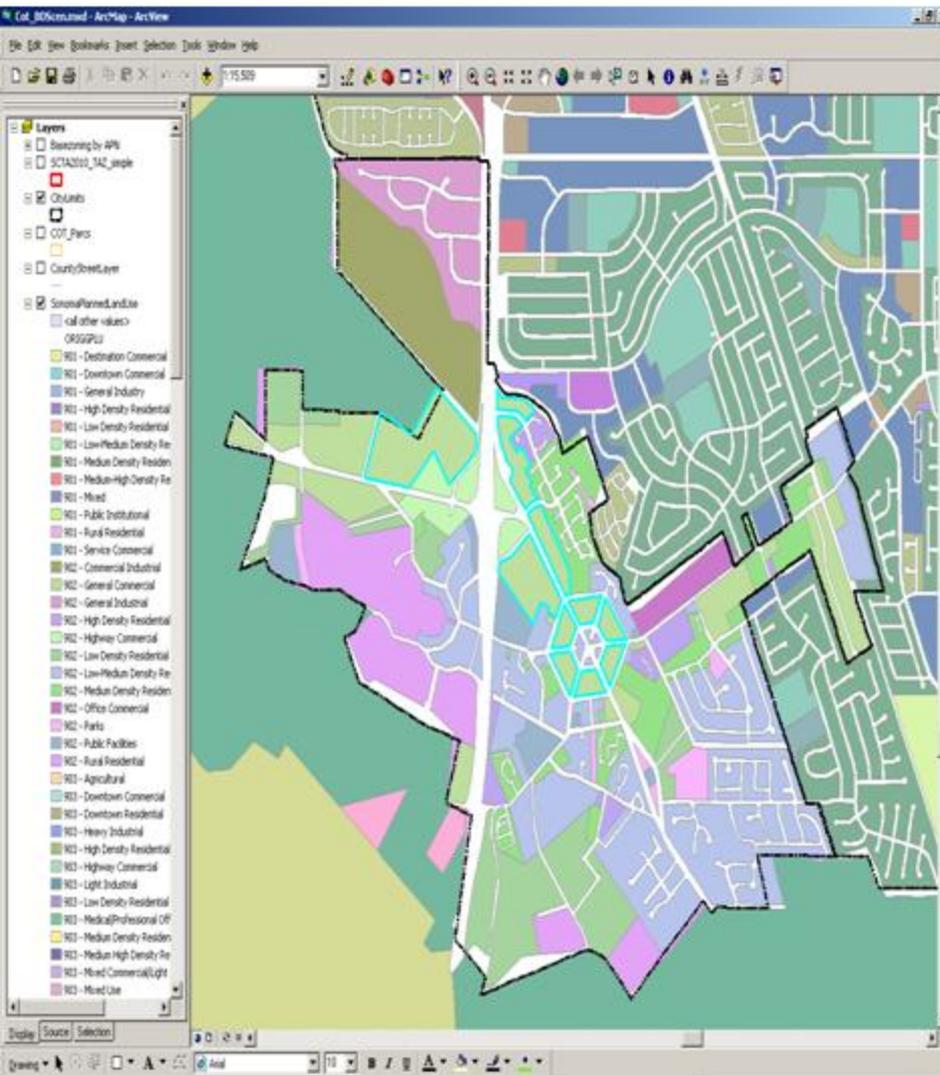

What I do for the planning department

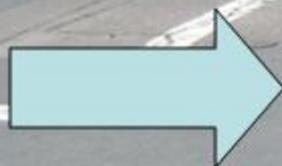

- My work at SCTA primarily has to do with GIS (Geographical information system) in which I spend most of my office hours on. When I'm out doing field work I could be at various locations throughout Sonoma county taking Bike Ped counts for a database that SCTA has been compiling since 2009.

Experiences

The Taylors

The importance work

- My GIS work is important because it is put forward into base information that can be used for future projects and so forth.
- I have also examined outdated data and brought it up to speed on current developments.
- Information is everything when planning, and reviewing the success of that planning.
- Bike and pedestrian counts also help create a mass of potentially important information that may be used in assessing the current infrastructure, and what possible improvements might be made.

What I learned

- How to act in a professional environment
- Courtesies in a meeting
- The chain of command
- Dressing appropriately depending on the meeting
- A deeper understanding of city/county transit.
- How to use GIS and take BIke/Ped counts

Thanks

- To MTC for this opportunity
- Michelle for coordinating everything, and answering all my questions
- My awesome supervisor
- Denise Berry, and Career Alliance
